The Intelligent Home System: A New Product Launch By iMonitor Solutions

PALATINE, IL. (October 10, 2012) – iMonitor Solutions is pleased to announce the launch of an intelligent and user-friendly platform to deliver services for Security, Home Automation, Energy Management and Eldercare. The solution is designed on a building-blocks concept, based on the award winning Z-Wave Technology and is the first of its kind in India.

The product focuses on providing wireless solutions that are highly flexible and geared towards making the home intelligent and customized to individual needs, and it is limited only by the user's creativity. The building blocks concept makes the system scalable and modular, allowing the user flexibility to choose parts or all of the areas of security, home automation, energy management and eldercare, depending on personal requirements and comfort. Ongoing expansion of the system is easy through this technology.

While the solution performs remote operations like the conventional home automation solutions, the real value accrues through the flexibility provided by the system in setting rules, schedules and scenarios that are interrelated and set with multiple levels of customized conditions. The customers can use the Platform to reduce energy cost, look after children or elders, enhance level of security while meeting emerging lifestyle requirements with significantly higher level of convenience

The wireless capability also makes it an ideal solution for existing homes and not just newly constructed ones. The user's master controller, which is Z-wave enabled, can be updated remotely as new features and functionalities are added.

This product has been designed to work even in environments of frequent power and broadband outages. Video streaming has been optimized to maximize user satisfaction even with poor bandwidth availability. In order to further personalize the system, users can build their own controls, select their own icons and give a look which is easy to use,

unique and meaningful to them. The system can be accessed through PCs, tablets and mobile phones. The mobile applications support iPhones, Android phones, Blackberry and J2ME phones.

iMonitor Solutions' founder, Girish Gaur says they are committed to constantly enhancing the solution through new features and functionalities to ensure that users meet more of their emerging needs from their current platform.
